

It's Thio-Sul[®]'s 50th Birthday!

And we still look pretty good...

For the past 50 years satisfied growers have been adding Thio-Sul, (ATS) (12-0-0+26S) to their UAN solution as the economical and effective way to stabilize and maximize nitrogen efficiency and provide needed sulfur. Thio-Sul with thiosulfate sulfur (S):

- ✓ helps maintain the critical N:S ratio
- ✓ supplies longer lasting thiosulfate sulfur
- ✓ improves the availability of soil phosphorus, iron, copper, zinc and manganese
- ✓ helps break down crop residue
- ✓ aids in the reduction of N loss due to ammonium volatilization
- ✓ supported by 50 years of university testing

Thio-Sul may be used in starters and throughout the growing season; broadcast, side-dress and through the irrigation water.

Thio-Sul, a critical part of a crop's fertility program!

Tell your supplier to make it a part of your program!
